Almaz Toktassin

Go Backend Engineer | Payments, Microservices (gRPC, Kafka, PostgreSQL)

Almaty, Kazakhstan (hybrid) | +7 706 711 9305 | almaztoktasin7@gmail.com | github.com/nighbee | LinkedIn | t.me/ztktsn

SUMMARY

Middle Go backend engineer in Almaty, focused on payment platforms and transaction integrity: double-entry ledger, ACID transactions, idempotency keys, optimistic locking and anti-fraud charging. Production Go microservices with gRPC/Protobuf, Kafka and PostgreSQL, event-driven flows, OpenTelemetry tracing and Prometheus/Grafana observability, Docker, Kubernetes (K3s) and GitHub Actions CI/CD. English C1, Russian C2, Kazakh native; open to hybrid work from Kazakhstan.

TECHNICAL SKILLS

Languages: Go (primary, Gin/Fiber), SQL, Python, TypeScript

Backend & Payments: Microservices, REST, gRPC/Protobuf, OpenAPI/Swagger, event-driven architecture, JWT/OAuth2/I Clean/Layered Architecture, double-entry ledger, ACID transactions, idempotency keys, optimistic locking, anti-fraud charging, concurrency (goroutines, channels, sync primitives)

Data & Messaging: PostgreSQL (schema design, indexing, migrations, query optimization, connection pooling, pool budgeting), Redis (caching, Pub/Sub, Streams), Kafka (fan-out delivery, retries, DLQ), PostGIS, MinIO/S3

Infrastructure & Quality: Docker, Docker Compose, Kubernetes (K3s, KEDA), Nginx, GCP, GitHub Actions CI/CD, Prometheus/Grafana, OpenTelemetry tracing, structured logging, health checks and monitoring endpoints, unit/integration testing

Security: bcrypt, TLS/HTTPS, rate limiting, anti-abuse, fail2ban, OWASP basics

Languages (spoken): English (C1), Russian (C2), Kazakh (native)

EXPERIENCE

Backend Developer (Contract) Feb 2025 – Present

Independent contracts *Remote, Almaty*

Projects ran partially in parallel.

- **BrightBund** (Technical Team Lead, fintech payments, Jan – Jul 2026)
  - Designed and built a production Go payments backend (Fiber, WebSockets, PostgreSQL 16 + PostGIS, Redis, Kafka, MinIO on GCP) centered on an atomic ACID double-entry ledger with idempotency keys and optimistic locking, plus upfront anti-fraud charging.
  - Event-driven delivery over Kafka fan-out push (APNs/FCM/HMS) with retries and DLQ; PostGIS/H3 geospatial discovery; Redis caching; S3-compatible receipt storage; cursor-safe transactional queries.
  - Shipped with OpenAPI/Swagger contracts, GitHub Actions CI/CD, Nginx gateway, rate limiting and fail2ban, Prometheus metrics with structured logging; led 10 backend and Flutter engineers through a closed beta of 100–200 testers, owning planning, reviews and release quality.
- **OneBilim Academy** (EdTech LMS, Jul 2026 – Present)
  - Backend/infra owner on a Go microservice backend (Gin/GORM, 18 services, ∼150 endpoints) serving ∼2,500 active learners and up to ∼2,000 uploads per day; JWT RBAC, API gateway, PostgreSQL 15 schema-per-service, cursor pagination; event-driven flows over Redis Pub/Sub.
  - Production hardening on Docker Compose + Nginx: Postgres tuning and pool budgeting, S3/MinIO presigned uploads, health/backup cron with restore rehearsals, staging-first deploys with rollback tags; fixed gateway TIME_WAIT/502 under peak intakes.
- **SalesAI** (call analyzer SaaS, Sep – Dec 2025)
  - Polyglot microservices: Go (Fiber) API orchestrator, Python (FastAPI) AI pipelines, TypeScript (Playwright) automation over gRPC and Redis Streams; async pipeline cutting single-call analysis from 30 minutes to 2 minutes; telephony ingest, observability, Sheets/CRM handoff and PDF/Excel reporting.
- **Institute of Engineering and IT, KBTU** (ESG platform, May – Sep 2025)
  - Built a Go/Fiber backend in clean layered architecture with PostgreSQL schemas for users/events/ participation and JWT-based RBAC for 20+ events and 100+ students; automated manual tracking (down 80%).

Backend Engineer (AI Systems) Jan 2026 – Apr 2026

QazCloud (LLP) *Remote (part-time)*

- Built a production Go microservice for ITSM ticket categorization with PostgreSQL and REST APIs; added a human-in-the-loop review workflow with configurable confidence thresholds.
- Implemented a thread-safe audit logger with Go concurrency primitives and a `/stats/failed` endpoint for real-time pipeline monitoring.

Open Source Contributor (Intern) Mar 2023 – Aug 2023
Amazon OpenSearch Contributor Initiative *Remote*

- Contributed 5 merged pull requests to Amazon OpenSearch (Java), a distributed search and analytics engine: bug fixes and reliability improvements through code review and testing.

EDUCATION

Kazakh-British Technical University (KBTU) Sep 2022 – Jun 2026
Bachelor of Information Systems *Almaty, Kazakhstan*

Ozyegin University (Erasmus+ Exchange) Jan 2025 – Jun 2025
Computer Science *Istanbul, Turkey*

International Engineering and Technological University (METU) Sep 2026 – Jun 2028
Masters in Software Engineering *Almaty, Kazakhstan*
